VoiceServe: Progress Report

12 November 2026 · Update to the report of 5 November

> Since the last report, the voice assistant has grown from answering only attendance questions to answering **five kinds of student questions**: attendance, fees, timetable, exams and assignments. It now gives a specific answer to each question, not a general one. Milestone 4 is one third done.

What VoiceServe is

A voice assistant inside a university student portal. A student taps a mic button on any page and asks in plain speech (or types). It answers out loud and shows a card on screen. It uses our own practice portal, **Univra**, filled with made-up students: same layout and menus as the real portal, our own name, logo and colours. No real student data is used.

Progress at a glance

#	Milestone	In simple words	Status
M1	Foundation	Whole system starts with one command	Done
M2	Practice portal (Univra)	Working student portal with fake students	Done
M3	First voice feature	Ask about attendance by voice or text	Done
M4	Full assistant	All student questions, opening pages, filing requests safely	In progress (part 1 of 3 done)
M5	Languages + rulebook	Hindi and Hinglish; answers from university rules	Not started
M6	Staff side	Staff dashboard; hand over to a human	Not started
M7	Testing + final report	Measure accuracy and speed	Not started

New since the last report

The assistant can now answer these, each with a spoken reply and an on-screen card (real examples from our demo student, Aarav):

Student asks	Assistant answers
"*How much fee do I owe?*"	You have 23,500 rupees due in total. The next payment, Hostel Fee (2nd instalment), is due on Sunday, 22 November.
"*What's my hostel fee?*"	Your Hostel Fee of 85,000 rupees is fully paid. Your Hostel Fee (2nd instalment) has 20,000 rupees pending.
"*Any classes after 2 pm on Monday?*"	You have 1 class on Monday, 16 November after 2 PM: CSE 343, Software Engineering, at 4 PM.

"*What's my next class?*"	Your next class is CSE 305, Database Management Systems, at 12 PM in room B3-416.
"*When is my next exam?*"	The exam, its date and time, and the seat: R1-S2 in room A-101, Academic Block A.
"*Do I have any pending assignments?*"	You have 4 pending assignments. The next one is Case Study 2 for Computer Networks, due Sunday.
"*In which subject do I have least attendance?*"	Your lowest attendance is in Computer Networks, at 73 percent. Attend the next 3 classes in a row to reach 75.

- **Understands days and times**: "today", "tomorrow", "on Friday", "next Monday", "after 2 pm", "next class".
- **Specific answers**: a question about one fee, one course or the weakest subject gets an answer about exactly that, not a general summary.
- **Fixed from our own testing**: we asked it real questions, found two that gave generic answers, and fixed both.

How we keep it safe and correct

- **No made-up numbers.** Every amount, date and percentage comes straight from the portal's database. The AI never invents them.
- **Fake data only**, and a student can only see their own data.
- **Honest when it can't**: if the data can't be reached, it says so instead of guessing.
- **Free to run**: everything so far works on free services; a $5-a-day spending cap protects any paid service.

How we checked it works

Check	Result
Automatic tests (whole project)	355 passing
Browser tests (a robot clicks through the portal)	12 tests
Live questions asked to the running system	All answers correct (examples above)
Code saved and backed up	Pushed to GitHub

How to see the demo

We share a public link from our laptop (it works while the laptop is on). Log in with registration number **24100001** and password **Demo@1234**, tap the mic (or type), and ask any question from the table above.

Next steps

- **M4 part 2: Navigate.** "Take me to hostel leave" opens the right page from about 180 menu items.
- **M4 part 3: Do things safely.** File a complaint or apply for hostel leave by voice. The assistant reads it back and saves it only after a clear "yes".
- **Then:** Hindi and Hinglish (M5), staff dashboard (M6), full evaluation (M7).

Questions for you

- Can we use a small paid budget (capped at $5 a day) for Hindi/Hinglish testing in M5?
- Is a demo from our laptop fine for the final presentation, or do we need a permanent website?
- May we record volunteer students' voices to test accuracy? Is a consent form needed?

All data shown is synthetic. No real university system or student record was used.
